

---

Due to forecasted warmer than normal temperatures and storage fields' limited injection capability in the winter, AIC's flexibility to take over-deliveries of supply is limited. For the remainder of February, AIC is requesting end users and their suppliers match deliveries to usage plus allowed bank withdrawals. Bank withdrawals are encouraged. As a guideline, if the average temperature in Peoria or Decatur is 35 degrees or warmer in February, this message will apply. AIC will send a separate communication if additional action including issuing a warm weather OFO is needed. Thanks in advance for assisting AIC in maintaining system integrity.
