

## MoGas Weather Alert 1/17/2026

### **Weather Alert Update #2 – No current changes from initial notice.**

Based on current cold weather forecasts, MoGas is preparing for increased pipeline utilization and reduced operational flexibility. Effective Gas Day January 17, 2026, MoGas is requesting all delivery point operators to minimize over-takes and all receipt point operators to minimize their under-deliveries into the system.

Intraday scheduling reductions may be implemented to ensure that nominations match actual flowing quantities. Shippers are encouraged to submit their nominations for the Timely cycle.

MoGas reserves the right to issue OFOs if shippers do not comply with this alert or to further protect the system.
